

The Fundamental Higher Consciousness Premise

The protocol turns executable in fact: Phase 1 places the brain's operating point inside the extended critical neighborhood for 7 of 7 connectomes and computes $\beta = 0.12$ with its honest structure-function negative; Phase 2 passes the β sedation-ordering validation in its clean form; and the Farnes corpus, supplied complete through the Raw_data_2 release, yields the evoked-LZ contrast as a three-layer result — background up, post-pulse up, background-corrected null — reproducing the paper's spontaneous-yes, evoked-no dissociation while the spontaneous LZc increase replicates at 9–10 of 10 subjects.

Audit and Consolidation, Eighth Edition · Z.ai

Executed this round: the Raw_data_2 release ingested (101 sha256-verified assets; evoked matrices in both conditions; complete spontaneous recordings; ten subjects); the round-twenty reshape error repaired (R32) with exact reproduction and the TMS-evoked structure restored

Method: three compute rounds on open and user-supplied data; Wilcoxon signed-rank contrasts with bootstrap intervals; every honest negative recorded at grade

Scope: the differentiation program's first executed phases, consolidated; the conventional-level ceiling and the equivalence doctrine unchanged
